Golden Rules

1 First, select the right equipment

2 SEPARATE THE WORK AREA FROM ALL POSSIBLE SOURCES OF POWER-SUPPLY
by opening circuit-breakers, switches...
and lock the links in the open position

3 CHECK THE ABSENCE OF VOLTAGE
at source and on site, on each conductor and apparatus involved

4 APPLY APPROPRIATE SHORT-CIRCUIT AND EARTHING SYSTEMS
in sufficient numbers on the conductors
of your network
where operation is taking place

5 SHOWN, WARN OTHERS AND LIMIT THE WORK AREA
even during the most simple temporary maintenance operation

VOLTAGE DETECTORS

Electronic voltage detector with contact electrode extension 15 kV 16 Hz 2/3

Voltage presence is indicated by:

- red flashing LED'S (very bright - visible at more than 50 m in direct lighting)
- powerful rated audible signal > 60 dB (A)/2 m

IEC-61243-1
DIN VDE 0682-411

Check of working order:

- by pressing the TEST button:
 - red LED flashes on
 - sound signal is activated
- when TEST button is released:
 - timed green LED lights up. While remaining on, this LED indicates the good working order of the detector. It lights off as soon as the red LED lights up in case of a voltage presence.

This checking validates the good working order of the detector.

Characteristics

Detectors are adjusted, tested and controlled one by one. Precise and stable operating threshold.

Reduced sensitivity to induced voltages.

Dielectrically tested on substation bars. High environmental resistance (impacts, vibrations, moisture). Temperature conditions: class N (IEC-1243-1 standard). storage and operation: -25 / +55 °C.

Robust housing.

Power supply: one 9-V alkaline battery type 6 LR 61.

The voltage detector is always ready for use, since it is on continuous monitoring conditions with almost no battery consumption. Under normal use conditions the batteries last more than a year.

Contact electrode extension fitted to the housing by screwing.

Delivered complete in a bag with insulating stick.

Weight: 1.7 Kg.

Voltage presence is indicated by:

Bring the hook into contact with the catenary or the feeder:

- The presence of voltage is indicated by illumination of the red diodes and triggering of the sound signal.
- The absence of voltage is confirmed by the green diodes, which remain illuminated after the contact is established.

Check of working order:

To check for correct operation:

- by pressing the Test button:
 - illumination of the red diodes
 - triggering of the sound signal
- by releasing the test button:
 - illumination of the green diodes for about 2 minutes.

This checking validates the good working order of the detector.

Characteristics

Characteristics:

Two-pole voltage detector to indicate the presence of voltage between the catenary and the rail.
There are a lot of interference voltages on catenary lines which come from other lines situated at proximity. This could create, especially when the weather is humid or when there are air pollution, VERY BIG induced voltage. This detector discriminate the real voltage from the induced one.

10 meters of cable.

Hook for catenary contact.

Magnetized handle for an easy use and connection to the rail.

Voltage presence is indicated by:

- Presence of real voltage indicated by:
 - Illumination of red LEDs with acoustic signal.
- Presence of induced voltage is indicated by:
 - Illumination of green LEDs and flashing of orangous LEDs with acoustic signal.

Checking

Connect the electrode to the rail handle to have a ring contact and the result is satisfactory if:

- When pressing the test button:
 - The red and orangous diodes lighting with acoustic signal sounding.
- When releasing the test button by:
 - Timed green LEDs lights up. It indicate the good working of the detector and it lights off as soon as the red LED lights up in case of a voltage presence or after 2 minutes.

VOLTAGE DETECTORS

Electronic voltage detectors with contact electrode extension

Voltage presence is indicated by: IEC-61243-1

- red flashing LED'S (very bright - visible at more than 50 m in direct lighting)
- powerful rated audible signal > 60 dB (A)/2 m

Check of working order:

- by pressing the TEST button:
 - red LED flashes on
 - sound signal is activated
- when TEST button is released:
 - timed green LED lights up. While remaining on, this LED indicates the good working order of the detector. It lights off as soon as the red LED lights up in case of a voltage presence.

This checking validates the good working order of the detector.

Characteristics

Detectors are adjusted, tested and controlled one by one. Precise and stable operating threshold. Reduced sensitivity to induced voltages.

Dielectrically tested on substation bars. High environmental resistance (impacts, vibrations, moisture).

Temperature conditions: class N (IEC-61243-1 standard).

storage and operation: -25 / +55 °C

Robust housing.

Power supply: one 9-V alkaline battery type 6 LR 61.

The voltage detector is always ready for use, since it is on continuous monitoring conditions with almost no battery consumption. Under normal use conditions the batteries last more than a year.

Contact electrode extension fitted to the housing by screwing.

Operation

Two-pole voltage detector for the presence of voltage between the catenary and the rail

- Presence of voltage is indicated by:
 - illumination of 6 red LEDs
 - an audible signal (60 dbA/2 m)
- Correct operation check: Correct operation of the equipment is verified:
 - by pressing the test button which causes:
 - illumination of the 6 red LEDs
 - activation of the audible signal

and

- by releasing the test button which causes:
 - temporary illumination of 6 green LEDs

The correct operation check consists in a built-in device. It checks all of the detector's functions.

VOLTAGE DETECTORS

63 to 550 kV electronic voltage detectors for indoor and outdoor use

Designed to give users maximum safety, the DETEX detectors of the CC-245 Series are the result of the most modern developments in electronic research. They offer a number of important properties and advantages.

Double signalling

Voltage presence indicated at the same time by:

- 4 extremely bright red flashing electro-luminescent diodes (visible at more than 50 meters even in direct lighting),
- a powerful rated acoustic signal (60 dB/2 m).

Checking

Satisfactory operation of the unit is indicated:

- When pressing the test button, by:
 - the red diodes flashing,
 - the acoustic signal sounding.
- When releasing the TEST button, by:
 - timed green up diodes lighting.

As long as they light, the unit continues its self-testing and the detector is fully operational.

High specifications

- Detectors are adjusted, tested and controlled one by one.
- Remarkably resistant to impacts, vibrations, extreme temperatures, humidity and sudden changes in the atmosphere (condensation, freezing).
- Precise and stable operating threshold. Insensitivity to induced voltages by limiting the operating voltage range.
- Robust housing made from polycarbonate with high mechanical properties and dielectric strength.
- The contact electrodes are simply screwed to the housing and are therefore easily interchangeable.

Power supply

- One 9 V battery type 6 LR 61.

End fittings:

- "C" for hexagonal sticks.
- "K" for universal sticks.

Weight

500 g (with battery).

Packaging

Units supplied complete with battery and electrode in a rigid synthetic case with handle.

- **Recommended sticks:** CM-46... serie. See pages 15/43.
